

# Passive Speakers and Amplifiers

Passive speakers and amplifiers are essential for live sound systems, offering flexibility and scalability for professional audio setups. Unlike active speakers, passive models rely on external amplifiers to provide the necessary energy to produce sound.

Frequently used for concerts, conferences, and theaters, passive speakers deliver clear, dynamic sound for both large outdoor venues and small indoor spaces. Amplifiers provide the power and precise control needed for optimal sound levels and tonal balance. High-quality connectors and cable assemblies further enhance performance, ensuring reliable and superior audio production.

## Recommended Products

### Speakers:

- Speakerlatch Connectors
- ¼" Connectors

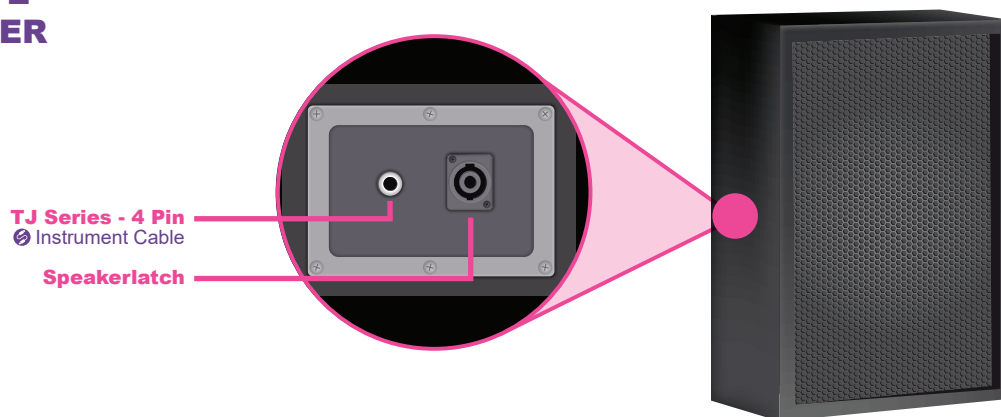

### Amplifiers:

- Speakerlatch Connectors
- XLR Connectors
- IEC Connectors
- Powerlatch Connectors

## Benefits

- Designed for precise and dynamic audio reproduction
- Engineered for long-term performance in demanding conditions
- Locking mechanism and keyed design to prevent accidental disconnection or intermating between other connectors

## PASSIVE SPEAKER

## AMPLIFIER
