Io Audio Technologies Releases New Line of Chassis Connectors for Audio & Lighting Applications

Io Audio Technologies has released a family of chassis connectors engineered to be used in most popular audio and lighting applications. The company's exacting standards and unique designs are evident in this new family of products.

The JL Series chassis connectors feature a metal housing for great EMI resistance. This series features precision-machined, one-piece, silver-plated contacts, solder cups, and fit in a standard D-size cut out for interoperability with current industry equipment. These connectors are perfect for use in custom patch panels, wall plates, or even original design applications where PCB mounting is not an option. The JL Series chassis connectors are available in black or nickel housing options.

The JLX Series chassis connectors boast all of the same great features of the JL series with the addition of a "metal on metal" housing which provides improved RF and EMI protection, making these connectors perfect for use in high noise environments or where cell phone or radio frequencies are most offensive. The JLX Series chassis connectors are available in nickel housing.

The E Series chassis connectors feature a high density, black plastic housing and precision machined, one-piece, gold-plated contacts. The E Series chassis connectors fit in a standard A-size cut out for interoperability with current industry equipment. These connectors come in vertical and horizontal PCB mount variations and are perfect for use in custom patch panels, wall plates, and original design applications where PCB mounting is necessary.

“Our family of chassis connectors offers a secure, and robust way of patching into or out of professional audio or lighting systems. They also use the same quality materials as industry “standard” products so you can count on fewer connection failures and long service life.” said Randy Rivero, VP of Technology for Io Audio Technologies.

All of Io Audio Technologies’ chassis connectors are available in 3 and 5 pin, male and female variations.
